

## AQ Series Tourmaline (Biostone) Filter

The Tourmaline filter provides 1 micron particulate filtration, carbon filtration and tourmaline which provides a mild ionization to the water before it runs over the electrodes. It also filters particles out of the water down to one micron before it goes through the carbon filter, which removes volatile organic chemicals (VOC), some pesticides and herbicides, as well as chlorine, chloramine, benzene, trihalomethane (THM) compounds, radon, solvents and hundreds of other man-made chemicals found in tap water.
